4. Create a web form that accepts a user's name and age. Write a Servlet to process the form data and display it back on the browser.

```
index.html  DoPostServletDemo.java  login.html  LoginServlet.java
1 package com.demo;
2 import java.io.IOException;
3
4 @WebServlet("/DoPostServletDemo")
5 public class DoPostServletDemo extends HttpServlet {
6     protected void doGet(HttpServletRequest request, HttpServletResponse response)
7         throws ServletException, IOException {
8         response.setContentType("text/html");
9         PrintWriter out = response.getWriter();
10        String name = request.getParameter("name");
11        String age = request.getParameter("age");
12        out.println("<html><body>");
13        out.println("<h2>GET Method Output</h2>");
14        out.println("Name: " + name + "<br>");
15        out.println("Age: " + age + "<br>");
16        out.println("<a href='index.html'>Back</a>");
17        out.println("</body></html>");
18    }
19    protected void doPost(HttpServletRequest request, HttpServletResponse response)
20        throws ServletException, IOException {
21        response.setContentType("text/html");
22        PrintWriter out = response.getWriter();
23
24        String name = request.getParameter("name");
25        String age = request.getParameter("age");
26
27        out.println("<html><body>");
28        out.println("<h2>POST Method Output</h2>");
29        out.println("Name: " + name + "<br>");
30        out.println("Age: " + age + "<br>");
31        out.println("<a href='index.html'>Back</a>");
32        out.println("</body></html>");
33    }
34 }
35
36 index.html  DoPostServletDemo.java  login.html  LoginServlet.java
37
38 1 <!DOCTYPE html>
39 2 <html>
40 3 <head>
41 4     <title>GET and POST Servlet Demo</title>
42 5 </head>
43 6 <body>
44 7 <h2>Form using GET Method</h2>
45 8 <form action="DoPostServletDemo" method="get">
46 9   Name: <input type="text" name="name"><br><br>
47 10  Age: <input type="number" name="age"><br><br>
48 11  <input type="submit" value="Submit using GET">
49 12 </form>
50 13 <hr>
51 14 <h2>Form using POST Method</h2>
52 15 <form action="DoPostServletDemo" method="post">
53 16   Name: <input type="text" name="name"><br><br>
54 17   Age: <input type="number" name="age"><br><br>
55 18   <input type="submit" value="Submit using POST">
56 19 </form>
57 20 </body>
58 21 </html>
```

OUTPUT:

The screenshot shows a web browser window with the address bar displaying 'localhost:8081/DoPostServletDemo/index.html'. The page contains two forms. The first form, titled 'Form using GET Method', has input fields for 'Name' (containing 'Vishu') and 'Age' (containing '19'), and a 'Submit using GET' button. The second form, titled 'Form using POST Method', has input fields for 'Name' (containing 'europe') and 'Age' (containing '58'), and a 'Submit using POST' button. A horizontal line separates the two forms.

POST Method Output

Name: europe

Age: 58

[Back](#)

GET Method Output

Name: Vishu

Age: 19

[Back](#)
